Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Application No. Applicant(s) 09/808.377 BRODSKY ET AL. Office Action Summary Examiner Art Unit CHRISS S. YODER III 2622 -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --Period for Reply A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS. WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). Status 1) Responsive to communication(s) filed on 18 May 2009. 2b) This action is non-final. 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213. Disposition of Claims 4) Claim(s) 3-6.12.22-24 and 30-38 is/are pending in the application. 4a) Of the above claim(s) is/are withdrawn from consideration. Claim(s) is/are allowed. 6) Claim(s) 3-6,12,22-24 and 30-38 is/are rejected. 7) Claim(s) _____ is/are objected to. 8) Claim(s) _____ are subject to restriction and/or election requirement. Application Papers 9) The specification is objected to by the Examiner. 10) ☐ The drawing(s) filed on 25 July 2001 is/are: a) ☐ accepted or b) ☐ objected to by the Examiner. Applicant may not request that any objection to the drawing(s) be held in abevance. See 37 CFR 1.85(a). Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d). 11) The oath or declaration is objected to by the Examiner, Note the attached Office Action or form PTO-152. Priority under 35 U.S.C. § 119 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f). a) ☐ All b) ☐ Some * c) ☐ None of: Certified copies of the priority documents have been received. 2. Certified copies of the priority documents have been received in Application No. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)). * See the attached detailed Office action for a list of the certified copies not received. Attachment(s) 1) Notice of References Cited (PTO-892) 4) Interview Summary (PTO-413)

Art Unit: 2622

DETAILED ACTION

Response to Arguments

Applicant's arguments filed May 18, 2009 have been fully considered but they are not persuasive.

- Applicant's arguments with respect to claim 5 have been considered but are moot
 in view of the new ground(s) of rejection. Applicant's amendment necessitated the new
 ground(s) of rejection presented in this Office action.
- 2. Applicant argues, with respect to claim 22, that the claim calls for analyzing the stereo video images during operation of the video camera and for the focal length adjustment, angle adjustment, and baseline adjustment to be based on the analysis of the stereo video images. And that Robinson at column 2, lines 51-66 calls for the distance to the object of interest to be measured by ultrasonic imaging or laser spot imaging rather than by analyzing the stereo video images.

However, the Examiner notes Robinson discloses the use of range finding through the use of a light-spot technique (column 2, lines 51-62), and uses the determined range to adjust settings of the focal length, angle, and baseline of the video camera (column 2, lines 51-62, and column 3, lines 15-49). Robinson also discloses that the light-spot technique projects a light spot (laser) on to the object being imaged by the stereo camera system, and then by analyzing the stereo video images to detect the light spot, determines the distance to the object (column 2, line 67—column 3, line

Art Unit: 2622

11). Therefore, Robinson is considered to adjust the focal length, angle, and baseline of the video camera based on the detected object distance determined through the analysis of the image data.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 31 and 35 rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Claim 31 recites the limitation "a base line adjusting means for adjusting a distance between the mirrors", which is not supported by the specification.

Claim 35 recites the limitation "adjusting the separation distance between the mirrors", which is not supported by the specification.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 2622

Claim 34 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 34 recites the limitation "adjusting the distance between the camera and the mirrors" in line 2. There is insufficient antecedent basis for this limitation in the claim. The Examiner believes that claim 34 should depend from claim 33. For purposes of examination, the claim will be examined as understood by the Examiner.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- Claims 22 and 32 are rejected under 35 U.S.C. 102(b) as being anticipated by Robinson (US Patent 4,751,570).
- 2. In regard to **claim 22**, note Robinson discloses the use of a stereo camera system (column 3, lines 21-24) comprising two video cameras (column 3, lines 21-42; and figure 2: 22), each camera being angled at an angle relative to each other (column 3, lines 43-48) and separated by a distance from each other (column 3, lines 43-48) for outputting a sequence of stereo video images (column 4, lines 10-13), a recognition system which analyzes the stereo video images during operation of the video cameras to output the stereo video images to locate an object of interest in a field of view of the

Art Unit: 2622

video cameras and determine the distance to the object of interest from the video cameras (column 2, line 51 – column 3, line 11; the stereo video images are analyzed to detect the light spot and determine the object distance, and using this determined distance, the camera settings are adjusted), and a controller which, based on input from the recognition system, controls a focal length adjustment mechanism which changes a focal length of at least one of the two cameras based on the analysis of the stereo video images (column 3, lines 49-59, and figure 2: 28), an angle adjustment mechanism which adjusts the angle of the video cameras relative to each other based on the analysis of the stereo video images (column 3, lines 15-48, and figure 2: 28), and baseline adjustment mechanism which adjusts the distance by which the video cameras are separated based on the analysis of the stereo video images (column 3, lines 15-48, and figure 2: 25).

3. In regard to claim 32, note Robinson discloses the use of a distance adjusting mechanism which is controlled by the controller to adjust a distance between at least one of the video cameras and the object of interest (column 2, lines 8-18; the use of zoom is considered to control the distance between the camera and the object).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made. Application/Control Number: 09/808,377 Page 6

Art Unit: 2622

Claims 3-6, 12, 23-24, 30, 33, 34, and 36-38 are rejected under 35 U.S.C.
 103(a) as being unpatentable over Suzuki (US Patent 5,671,450) in view of Zanen (US Patent 5,532,777), and further in view of Robinson (US Patent 4,751,570).

5. In regard to claim 5, note Suzuki discloses a stereo camera system comprising stereo imaging means for outputting at least one stereo image (column 1, lines 5-11, and figure 1), said stereo imaging means including a camera (column 4, lines 41-45, and figure 1: 1), a set of mirrors angled with respect to each other at an angle relative to a centrally located common plane intersecting said camera, each mirror disposed an adjustable distance from the camera along the common plane, for directing light from an object reflected in said mirrors along a straight line of sight from said mirrors to the camera, for producing a stereo effect in the output of the camera (column 5, lines 15-22, and figure 3: 8L and 8R), adjusting means for automatically changing at least one system parameter which affects the spatial resolution of the object of interest based on the focusing of the camera (column 6, line 49 - column 7, line 12; parameters of the stereo adapter are adjusted in relation to the focusing of the camera), the adjusting means comprising a distance adjustment means for adjusting the distance between the camera and the set of mirrors (column 4, line 59 - column 5, line 8, and figure 6; when the camera is focused/zoomed, the entire stereo adapter is moved along the optical axis), and a focal length adjustment means for changing a focal length of the camera (column 4, lines 41-53). Therefore, it can be seen that Suzuki fails to explicitly disclose the use of a recognition means for analyzing stereo image data from the camera to locate an object of interest in a field of view of the camera and determine at least one of

Art Unit: 2622

a distance of the object of interest from the stereo imaging means and a size of the object of interest, that the system parameters are changed based on the analysis of the stereo image data at least one of the located distance of the object of interest from the stereo imaging means and the size of the object of interest, and that the adjustment means includes an angle adjustment means for adjusting the angle of the set of mirrors relative to the centrally located plane.

In analogous art, Zanen discloses the use of a stereo imaging adapter having parameters that are adjusted in relation to the focus amount of the camera (column 5, lines 57-67), and the use of an angle adjustment means for adjusting the angle of the set of mirrors relative to the centrally located plane (column 6, lines 16-36, and figures 6-7; the angle between the inner mirrors 16 is adjusted using rod 43 based on the focusing of the lens). Zanen teaches that the use of an angle adjustment means for adjusting the angle of the set of mirrors relative to the centrally located plane is preferred in order to allow for corrections of the field of view (column 5, lines 20-25). Therefore, it would have been obvious to one of ordinary skill in the art to modify the Suzuki device to include the use of an angle adjustment means for adjusting the angle of the set of mirrors relative to the centrally located plane in order to correct of the field of view of the imaging device, as suggested by Zanen.

Also in analogous art, Robinson discloses the use of a recognition means for analyzing stereo image data from the camera to locate an object of interest in a field of view of the camera and determines the distance of the object of interest from the stereo imaging means (column 2. line 46 – column 3. line 11, the stereo image data is

Page 8

Application/Control Number: 09/808,377

Art Unit: 2622

analyzed to detect the light spot and determine the object distance), and changing imaging system parameters based on the distance of the object of interest from the stereo imaging means (column 2, line 46 - column 3, line 11; the determined distance is used to control automatic focusing). Robinson teaches that the recognition of an object of interest by analyzing stereo image data is preferred in order to accurately detect the object distance, and automatically adjust the focus (column 2, line 46 - column 3, line 11). Therefore, it would have been obvious to one of ordinary skill in the art to modify the primary reference of Suzuki as modified by Zanen to include the use detection of the distance and/or size of a detected based on the analysis of stereo image data from the camera in order to accurately detect the object distance, and automatically adjust the focus, as suggested by Robinson. Consequently, the Examiner notes that since the adjustment of the distance between the camera and the set of mirrors disclosed by Suzuki, and the adjustment of the angle of the set of mirrors disclosed by Zanen are both controlled based on the focus adjustment, by modifying the primary reference of Suzuki as modified by Zanen to include the use of focus adjustment based on the detected object distance determined from the analysis of stereo image data, as suggested by Robinson, the adjustment of the angle of the set of mirrors, distance between the camera and the set of mirrors, and the focal length of the camera are considered to be controlled based on the analysis of the stereo image data.

In regard to claim 3, note Suzuki discloses the use of a still camera and the at least one stereo image is a still image (column 1, lines 5-11).

Art Unit: 2622

 In regard to claim 4, note Suzuki discloses the use of a video camera and the at least one stereo image is a sequence of video images (column 1. lines 5-11).

- 8. In regard to **claim 6**, note Robinson discloses the use of a controller for controlling the focus settings based on the signal from the recognition means (column 2, line 46 column 3, line 11; the stereo image data is analyzed to detect the light spot and determine the object distance and adjust the focus). Suzuki and Zanen control the angle, distance, and focal length based on the focus/zoom settings (Suzuki: column 4, line 41 column 5, line 8; Zanen: column 5, line 57 column 6, line 36). Therefore, through the combination of Robinson with Suzuki and Zanen, at least one of the angle, distance, and focal length adjustment means are considered to be controlled based on the signal from the recognition means.
- In regard to claim 12, note Robinson discloses that the recognition means is a stereo vision system (column 2, line 46 – column 3, line 11).
- In regard to claim 23, note Suzuki discloses that the mirrors have adjacent ends positioned at a common point (column 5, lines 4-22, and figure 3: 8L and 8R).
- 11. In regard to **claim 24**, note Suzuki discloses that the mirrors are disposed for directing the light from the object which is reflected in the mirrors directly from the mirrors to the camera (column 5, lines 15-22).
- 12. In regard to claim 30, note Robinson discloses that the recognition means analyzes the stereo image data during operation of the camera (column 2, line 46 column 3, line 11; the stereo image data from the camera is used in an auto focus routine).

Art Unit: 2622

13. In regard to claims 33, 34 and 36, these are method claims, corresponding to the apparatus in claim 5. Therefore, claims 33, 34 and 36 have been analyzed and rejected as previously discussed with respect claim 5.

14. In regard to claims 37 and 38, these are method claims, corresponding to the apparatus in claims 23 and 30, respectively. Therefore, claims 37 and 38 have been analyzed and rejected as previously discussed with respect claims 23 and 30.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
